

Who: David Kopala, Jon Oulton, Johnson Cheung, Baljot Kaur, Alex Ho, muyu deng

Title: BeatsByDavid

User Acceptance Tests:

- Front end works correctly – This will be proved to work if the user selects the top and the page correctly turns into the about us page. If the user clicks the rooms. It will correctly got to the history
- A history of data – This will be proved as multiple data points are taken at different times to show a trend
- Real time data – This will be proved by actively making noise near the device to make a change in decibel level, as well as get an accurate reading of temperature.

Automated Testing

We used Travis CI for our automated testing. When we pushed new commits to the GitHub repo, Travis CI would spin up the Docker container and run testing file that made requests to the image
